

Actualización versión VSENSOR

- Verificar versión actual del vsensor

```

Welcome to the vSensor Configuration Console.
Welcome
Hostname: LX0525PVSNO1V
IP Address: 10.140.48.131
vSensor Version: 6.2.8

* Pointing at Darktrace master https://10.7.0.54:443 using Push Token mode
* Not configured for osSensor communication
* Configured with 16GB of PCAP storage
* Automatic software updates enabled

< OK >
```

- Con el comando update comienza la actualización

```

darktrace@LX0525PVSNO1V:~$ sudo apt update
sudo: unable to resolve host LX0525PVSNO1V: Temporary failure in name resolution

W: Failed to fetch https://packages-cdn.darktrace.com/ubuntu/dists/noble-updates/InRelease Temporary failure resolving 'packages-cdn.darktrace.com'
```

Se confirma que se tiene novedad con la resolución DNS

- Verificamos la resolución DNS con el siguiente comando

```
darktrace@LX0525PVSNO1V:~$ nslookup google.com
;; communications error to ::1#53: connection refused
;; communications error to ::1#53: connection refused
;; communications error to ::1#53: connection refused
;; communications error to 127.0.0.1#53: connection refused
;; no servers could be reached

darktrace@LX0525PVSNO1V:~$
```

Posterior, se empieza a revisar y descartar posibles fallas.

- Verificamos que es hostname corresponda al equipo que se está revisando.

```
darktrace@LX0525PVSNO1V:~$ hostname
LX0525PVSNO1V
darktrace@LX0525PVSNO1V:~$
```

- Procedemos a desactivar el IPV6 (en ocasiones bloquea la resolución de DNS)

Paso 1. Verificamos que este no se encuentre deshabilitado

sudo grep -R "listen .*::" /etc/nginx

```
darktrace@LX0525PVSNO1V:~$ sudo grep -R "listen .*::" /etc/nginx
sudo: unable to resolve host LX0525PVSNO1V: Temporary failure in name resolution
/etc/nginx/conf.d/ssl-redirect.conf: listen [::]:80 default_server;
/etc/nginx/conf.d/ssl-redirect.conf: listen [::]:81 proxy_protocol;
/etc/nginx/conf.d/ssl-redirect.conf: listen [::]:443 ssl http2;
/etc/nginx/conf.d/ssl-redirect.conf: listen [::]:444 ssl http2 proxy_protocol;
grep: /etc/nginx/modules-enabled/50-mod-stream.conf.removed: No such file or directory
grep: /etc/nginx/modules-enabled/50-mod-http-xslt-filter.conf.removed: No such file or directory
grep: /etc/nginx/modules-enabled/50-mod-http-geoip2.conf.removed: No such file or directory
grep: /etc/nginx/modules-enabled/50-mod-http-image-filter.conf.removed: No such file or directory
grep: /etc/nginx/modules-enabled/70-mod-stream-geoip2.conf.removed: No such file or directory
grep: /etc/nginx/modules-enabled/50-mod-mail.conf.removed: No such file or directory
darktrace@LX0525PVSNO1V:~$
```

Paso 2. Lo desactivamos (en este paso antepone el “#” en las líneas seleccionadas para desactivarlo)

sudo nano /etc/nginx/conf.d/ssl-redirect.conf

```
listen 80 default_server;
# listen [::]:80 default_server;
include conf.d/common-options;
include conf.d/http-options;
}
server {
listen 81 proxy_protocol;
# listen [::]:81 proxy_protocol;

# Fix: could not build optimal proxy_headers_hash, you should increase either proxy_headers_hash_max_size: 512 or proxy_
proxy_headers_hash_max_size 1024;

include conf.d/common-options;
include conf.d/http-options;
}

server {
listen 443 ssl http2;
# listen [::]:443 ssl http2;
include conf.d/common-options;
include conf.d/ssl-options;
}

# Support TCP PROXY v2 services like Azure Private Link
server {
listen 444 ssl http2 proxy_protocol;
# listen [::]:444 ssl http2 proxy_protocol;
Remote-side unexpectedly closed network connection
}

Exit Read File Replace Paste Justify Go To Line Redo Copy
Session stopped
- Press <Return> to exit tab
- Press R to restart session
- Press S to save terminal output to file
```

IMPORTANTE: Después de actualizar el IPV6 , damos **ctrl+O** y luego **ENTER** para guardar los cambios realizados

- Ejecutamos nuevamente el comando: **sudo grep -R "listen .*::" /etc/nginx** y garantizamos que las filas modificadas cuenten con el símbolo #

```
darktrace@LX0525PVSNO1V:~$ sudo grep -R "listen .*::" /etc/nginx
sudo: unable to resolve host LX0525PVSNO1V: Temporary failure in name resolution
/etc/nginx/conf.d/ssl-redirect.conf # listen [::]:80 default_server;
/etc/nginx/conf.d/ssl-redirect.conf # listen [::]:81 proxy_protocol;
/etc/nginx/conf.d/ssl-redirect.conf # listen [::]:443 ssl http2;
/etc/nginx/conf.d/ssl-redirect.conf # listen [::]:444 ssl http2 proxy_protocol;
/etc/nginx/conf.d/ssl-redirect.conf save:# listen [::]:80 default_server;
/etc/nginx/conf.d/ssl-redirect.conf save:# listen [::]:81 proxy_protocol;
/etc/nginx/conf.d/ssl-redirect.conf save:# listen [::]:443 ssl http2;
/etc/nginx/conf.d/ssl-redirect.conf save:# listen [::]:444 ssl http2 proxy_protocol;
```

- Con el comando **sudo nano /etc/hosts**, vamos a actualizar en la carpeta el hostname

```
GNU nano 7.2 /etc/hosts
127.0.0.1 localhost
127.0.1.1 darktrace-vsensor
# The following lines are desirable for IPv6 capable hosts
::1 localhost ip6-localhost ip6-loopback
ff02::1 ip6-allnodes
ff02::2 ip6-allrouters
127.0.1.1 darktrace-vsensor
```

```
GNU nano 7.2 /etc/hosts
127.0.0.1 localhost
127.0.1.1 LX0525PVSN01V
# The following lines are desirable for IPv6 capable hosts
::1 localhost ip6-localhost ip6-loopback
ff02::1 ip6-allnodes
ff02::2 ip6-allrouters
127.0.1.1 darktrace-vsensor
```

Wrote 8 lines

PG Help Write Out Where Is Cut Execute Location M-U Undo

IMPORTANTE: Después de actualizar el hostname , damos **ctrl+O** y luego **ENTER** para guardar los cambios realizados

Después de realizados estos cambios, procedemos a ingresar los DNS a la carpeta correspondiente

- Con los siguientes comandos intentamos corregir los problemas DNS

sudo tee /etc/resolv.conf <<EOF

> nameserver 10.8.244.164

> nameserver 10.7.27.164

> EOF

```
darktrace@LX0525PVSNO1V:~$ sudo tee /etc/resolv.conf <<EOF
nameserver 10.8.244.164
nameserver 10.7.27.164
EOF
nameserver 10.8.244.164
nameserver 10.7.27.164
darktrace@LX0525PVSNO1V:~$ █
```

De esta forma se ingresan correctamente.

- Nuevamente, ejecutamos el comando de nslookup hacia Google.com

```
darktrace@LX0525PVSNO1V:~$ nslookup google.com
Server:          10.8.244.164
Address:         10.8.244.164#53

Non-authoritative answer:
Name:   google.com
Address: 142.250.218.206
Name:   google.com
Address: 2607:f8b0:400c:c32::64
Name:   google.com
Address: 2607:f8b0:400c:c32::65

239 packages can be upgraded. Run 'apt list --upgradable' to see them.
N: Ignoring file 'darktrace-archive-vm.list.focal' in directory '/etc/apt/sources.list.d/' as it has an invalid filename extension
darktrace@LX0525PVS01V:~$

```

N - Please support MobaXterm by subscribing to the professional edition here: <https://mobaxterm.mobatek.net>

Este puede ser corregido con el comando:

```

sudo mv /etc/apt/sources.list.d/darktrace-archive-vm.list.focal
/etc/apt/sources.list.d/darktrace-archive-vm.list

```

```

darktrace@LX0525PVS01V:~$ sudo mv /etc/apt/sources.list.d/darktrace-archive-vm.list.focal /etc/apt/sources.list.d/darktrace-archive-vm.list
darktrace@LX0525PVS01V:~$

```

N - Please support MobaXterm by subscribing to the professional edition here: <https://mobaxterm.mobatek.net>

Y ejecutamos nuevamente el update

```
darktrace@LX0525PVS01V:~$ sudo apt update
Hit:1 https://packages-cdn.darktrace.com/apt noble InRelease
Hit:2 https://packages-cdn.darktrace.com/ubuntu noble InRelease
Hit:3 https://packages-cdn.darktrace.com/ubuntu noble-updates InRelease
Hit:4 https://packages-cdn.darktrace.com/ubuntu noble-backports InRelease
Hit:5 https://packages-cdn.darktrace.com/secubuntu noble-security InRelease
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
239 packages can be upgraded. Run 'apt list --upgradable' to see them.
darktrace@LX0525PVS01V:~$
```

Posterior ejecutamos **sudo apt upgrade** para culminar la actualización

```
